China Releases New Draft Standards for 1,058 MRL in Foods as SPS 1051

Report Categories:

FAIRS Subject Report

Approved By:

Jennifer Clever

Prepared By:

Jennifer Clever and Ma Jie

Report Highlights:

On August 5, 2016, China notified the WTO of draft standards on maximum residue limits (MRLs) in foods for 1,058 maximum residue limits (MRLs) covering 160 pesticides (including 2, 4-D-dimethylammonium), as SPS/N/CHN/1051. The deadline for comment submissions is October 4, 2016. The proposed date of entry is yet to be determined. Comments can be sent to China's SPS Enquiry Point at sps@aqsiq.gov.cn.

The following report contains an unofficial translation of this draft measure.

Editors' Note: The asterisk appearing in the MRL column means that the limit is a temporary MRL. A temporary MRL is usually set under the following four conditions:

1. The dietary risk assessment data is incomplete;
2. The Acceptable Daily Intake (ADI) is temporary (ADI is used as the basis for MRL setting);
3. There is no surveillance or analysis method for the MRL that complies with the standard requirements;
4. In emergency situations, the pesticide is approved to be used on un-registered crops.
